Re: EPQA System University Case Study
Date: 4/9/2024

Hello Everyone,

We have recently released a case study titled “Energy Management for Education Facilities” that examines two applications of the EnergyPQA.com® AI driven energy management system – one in the University of Houston and one at Washtenaw Community College in Michigan. The case study describes the experience of the facility managers with the EnergyPQA® implementation and details their usage of the system on their campuses. It explains the benefits they have experienced with the system and their plans for expanded usage.

The case study is attached to this email and is available on EIG’s website in the new Case Studies webpage, which is listed under White Papers in the Solutions menu.

The direct link to the case study webpage is:
<https://www.electroind.com/view-case-studies/>

We will be working on additional case studies. If you have an idea for a case study for our meters and/or software applications, please let us know.
